### COMMUNICATION SYSTEM FOR INDUSTRY PROFESSIONALS.

The Vokkero® Guardian and Vokkero® Guardian ATEX wireless communication systems are used by companies in the industrial and service industries: purification, decontamination or maintenance in nuclear power stations.

These dangerous operations are entrusted to specialist companies who must comply with strict legislation that imposes very tight constraints: the wearing of watertight suits, protective clothing, gloves and assisted breathing apparatus.

In addition, working conditions can be extreme: interventions in total or partial confinement areas, restricted entries and exits, duration of exposure where communication is necessarily limited to a strict minimum in the work area or with the outside.

It is because the Vokkero® Guardian wireless communication system addresses all these issues that it is used by industrial and service companies.
